myBBM — Peta Stok BBM Live + Scan Struk AI

Data stok BBM real-time Indonesia tidak ada. myBBM membangunnya bottom-up: crowdsource + AI.

> **“Jangan antre 20 menit untuk SPBU yang kosong.”**

2 / PROBLEM — IMPACT 20%

Tidak ada API stok BBM real-time

Antre sia-sia

15–20 menit antre → Pertalite habis. Waktu + bensin terbuang. Paling sakit: komuter & ojek/logistik Jabodetabek.

Struk dibuang

Catat manual malas. Padahal struk = sinyal stok paling segar, terbuang setiap hari.

Target: 100JT+ pengendara → awal komuter + ojek/logistik → fleet SME 5–50 → konsumen data (logistik, agregator, operator).

3 / SOLUTION + DEMO — DEMO READINESS 15%

Cek → Scan → Hemat, live 100%

/landing → Peta SPBU (x mnt lalu) → FAB Catat: foto struk → Vote → km/L + CSV

PETA

Pertamina/Shell/BP/Vivo. Jujur: **“belum ada data”** jika kosong.

AI SCAN

Struk → SPBU, BBM, liter, Rp/L, total. **1 scan = 1 laporan stok.**

TRUST

Mulai 0 vote. Cooldown + penalti spam. Konsensus: resensi × trust × votes.

4 / ARSITEKTUR & AI — FEASIBILITY 20% + INNOVATION 25%

1 codebase: Build · Secure · Scale

Build + Scale

React 19 + Vite + Tailwind PWA → Express `server.ts` → Cloud Run asia-southeast2 scale-to-zero. Firestore: user owner-scoped, stations public-read.

AI hemat (Innovation)

Gemini Flash server-side only. Downscale 1600px, strict-JSON, temp 0, null-bukan-tebakan. Clamp tangki. Gagal jujur 503/502/400 + manual.

Secure: default-deny rules, tulis wajib login, delete dilarang, cooldown server-enforced, PII minim, key runtime-only.

Mari buka data BBM Indonesia

Yang saya butuhkan

- **3 fleet Jabodetabek** — pilot 4–8 minggu (5–50 kendaraan)
- **Validator komunitas** — ojek / komuter yang lapor rutin
- **Mentor data partnership** — akses agregator / operator
